By: Geren, Bailes, Isaac H.B. No. 3837

A BILL TO BE ENTITLED

1	AN ACT
2	relating to the designation of advanced clean energy projects.
3	BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS:
4	SECTION 1. Section 382.003(1-a), Health and Safety Code, is
5	amended to read as follows:
6	(1-a) "Advanced clean energy project" means:
7	(A) a project [for which an application for a
8	permit or for an authorization to use a standard permit under this
9	chapter is received by the commission on or after January 1, 2008,
10	and before January 1, 2020, and] that:
11	$\underline{\text{(i)}}$ [$\frac{\text{(A)}}{\text{(A)}}$] involves the use of coal,
12	biomass, petroleum coke, solid waste, natural gas, or fuel cells
13	using hydrogen derived from such fuels, in the generation of
14	electricity, or the creation of liquid fuels outside of the
15	existing fuel production infrastructure while co-generating
16	electricity, whether the project is implemented in connection with
17	the construction of a new facility or in connection with the
18	modification of an existing facility and whether the project
19	involves the entire emissions stream from the facility or only a
20	portion of the emissions stream from the facility;
21	$\underline{\text{(ii)}}$ [\frac{(B)}{B}] with regard to the portion of the
22	emissions stream from the facility that is associated with the
23	project, is capable of achieving:
24	(a) [(i)] on an annual basis:

H.B. No. 3837
 1
                                       (1) [(a)] a
                                                        99
                                                              percent
                                                                         or
 2
    greater reduction of sulfur dioxide emissions;
 3
                                       (2) [\frac{(b)}{(b)}]  if
                                                        the
                                                              project
                                                                         is
    designed for the use of feedstock, substantially all of which is
 4
 5
    subbituminous coal, an emission rate of 0.04 pounds or less of
    sulfur dioxide per million British thermal units as determined by a
 6
 7
    30-day average; or
8
                                       (3) [(c)] if the
                                                              project
    designed for the use of one or more combustion turbines that burn
 9
10
    natural gas, a sulfur dioxide emission rate that meets best
    available control technology requirements as determined by the
11
12
    commission;
                                  (b) [<del>(ii)</del>] on an annual basis:
13
14
                                       (1) [\frac{(a)}{(a)}]
                                                    а
                                                        95
                                                              percent
                                                                         or
15
    greater reduction of mercury emissions; or
16
                                       (2) [<del>(b)</del>]
                                                    if
                                                         the
                                                              project
                                                                         is
17
    designed for the use of one or more combustion turbines that burn
    natural gas, a mercury emission rate that complies with applicable
18
19
    federal requirements;
20
                                  (c) [<del>(iii)</del>]
                                                an
                                                        annual
                                                                    average
    emission rate for nitrogen oxides of:
21
22
                                       (1) [\frac{(a)}{(a)}] 0.05 pounds
                                                                       less
23
    per million British thermal units;
24
                                       (2) [(b)] if the project
25
    gasification technology, 0.034 pounds or less per million British
26
    thermal units; or
                                       (3) \left[\frac{(c)}{c}\right] if the
27
                                                              project
                                                                         is
```

- H.B. No. 3837
- 1 designed for the use of one or more combustion turbines that burn
- 2 natural gas, two parts per million by volume; and
- $(d) \left[\frac{(iv)}{(iv)}\right]$ an annual average emission
- 4 rate for filterable particulate matter of 0.015 pounds or less per
- 5 million British thermal units; and
- 6 (iii) [(C)] captures not less than 50
- 7 percent of the carbon dioxide in the portion of the emissions stream
- 8 from the facility that is associated with the project and
- 9 sequesters that captured carbon dioxide by geologic storage or
- 10 other means; or
- 11 (B) a project that is a facility:
- (i) for which an authorization to use a
- 13 standard permit was approved after January 1, 2020, but before
- 14 September 1, 2023; and
- (ii) that includes carbon capture in its
- 16 design and is capturing not less than 95 percent of the carbon
- 17 dioxide in the emissions stream already permitted for carbon
- 18 capture.
- 19 SECTION 2. This Act takes effect September 1, 2023.
