

Amend CSSB 1952, by adding the following sections and renumbering accordingly:

SECTION _____. Section 382.05101, Health and Safety Code, is amended to read as follows:

Sec. 382.05101. DE MINIMIS AIR CONTAMINANTS. The commission may develop by rule the criteria to establish a de minimis level of air contaminants for facilities or groups of facilities below which a permit under Section 382.0518 or 382.0519, a standard permit under Section 382.05195 or 382.05198, or a permit by rule under Section 382.05196 is not required.

SECTION _____. Subsection (c), Section 382.0511, Health and Safety Code, is amended to read as follows:

(c) The commission may authorize changes in a federal source to proceed before the owner or operator obtains a federal operating permit or revisions to a federal operating permit if:

(1) the changes are de minimis under Section 382.05101; or

(2) the owner or operator:

(A) has obtained a preconstruction permit or permit amendment required by Section 382.0518; or

(B) is operating under:

(i) a standard permit under Section 382.05195 or 382.05198;

(ii) [~~7~~] a permit by rule under Section 382.05196; [~~7~~] or

(iii) an exemption allowed under Section 382.057.

SECTION _____. Subchapter C, Chapter 382, Health and Safety Code, is amended by adding Sections 382.05198 and 382.05199 to read as follows:

Sec. 382.05198. STANDARD PERMIT FOR CERTAIN CONCRETE PLANTS. (a) The commission shall issue a standard permit for a permanent concrete plant that performs wet batching, dry batching, or central mixing and that meets the following requirements:

(1) production records must be maintained on site while the plant is in operation until the second anniversary of the end of the period to which they relate;

(2) each cement or fly ash storage silo and weigh hopper must be equipped with a fabric or cartridge filter or vented to a fabric or cartridge filter system;

(3) each fabric or cartridge filter, fabric or cartridge filter system, and suction shroud must be maintained and operated properly with no tears or leaks;

(4) excluding the suction shroud filter system, each filter system must be designed to meet a standard of at least 0.01 outlet grain loading as measured in grains per dry standard cubic foot;

(5) each filter system and each mixer loading and batch truck loading emissions control device must meet a performance standard of no visible emissions exceeding 30 seconds in a five-minute period as determined using United States Environmental Protection Agency Test Method 22 as that method existed on September 1, 2003;

(6) if a cement or fly ash silo is filled during nondaylight hours, the silo filter system exhaust must be sufficiently illuminated to enable a determination of compliance with the performance standard described by Subdivision (5);

(7) the conveying system for the transfer of cement or fly ash to and from each storage silo must be totally enclosed, operate properly, and be maintained without any tears or leaks;

(8) except during cement or fly ash tanker connection or disconnection, each conveying system for the transfer of cement or fly ash must meet the performance standard described by Subdivision (5);

(9) a warning device must be installed on each bulk storage silo to alert the operator in sufficient time for the operator to stop loading operations before the silo is filled to a level that may adversely affect the pollution abatement equipment;

(10) if filling a silo results in failure of the pollution abatement system or failure to meet the performance standard described by Subdivision (5), the failure must be documented and reported to the commission;

(11) each road, parking lot, or other area at the plant site that is used by vehicles must be paved with a cohesive hard

surface that is properly maintained, cleaned, and watered so as to minimize dust emissions;

(12) each stockpile must be sprinkled with water or dust-suppressant chemicals or covered so as to minimize dust emissions;

(13) material used in the batch that is spilled must be immediately cleaned up and contained or dampened so as to minimize dust emissions;

(14) production of concrete at the plant must not exceed 300 cubic yards per hour;

(15) a suction shroud or other pickup device must be installed at the batch drop point or, in the case of a central mix plant, at the drum feed and vented to a fabric or cartridge filter system with a minimum capacity of 5,000 cubic feet per minute of air;

(16) the bag filter and capture system must be properly designed to accommodate the increased flow from the suction shroud and achieve a control efficiency of at least 99.5 percent;

(17) the suction shroud baghouse exhaust must be located more than 100 feet from any property line;

(18) stationary equipment, stockpiles, and vehicles used at the plant, except for incidental traffic and vehicles as they enter and exit the site, must be located or operated more than 100 feet from any property line; and

(19) the central baghouse must be located at least 440 yards from any building used as a single or multifamily residence, school, or place of worship at the time the application to use the permit is filed with the commission if the plant is located in:

(A) an area that is not subject to municipal zoning regulations; and

(B) a county with a population of at least one million.

(b) Notwithstanding Subsection (a)(18), the commission shall issue a standard permit for a permanent concrete plant that performs wet batching, dry batching, or central mixing and does not meet the requirements of that subdivision if the plant meets the

other requirements of Subsection (a) and:

(1) each road, parking lot, and other traffic area located within the distance of a property line provided by Subsection (a)(18) is bordered by dust-suppressing fencing or another barrier at least 12 feet high; and

(2) each stockpile located within the applicable distance of a property line is contained within a three-walled bunker that extends at least two feet above the top of the stockpile.

Sec. 382.05199. STANDARD PERMIT FOR CERTAIN CONCRETE BATCH PLANTS: NOTICE AND HEARING. (a) A person may not begin construction of a permanent concrete plant that performs wet batching, dry batching, or central mixing under a standard permit issued under Section 382.05198 unless the commission authorizes the person to use the permit as provided by this section. The notice and hearing requirements of Subsections (b)-(g) apply only to an applicant for authorization to use a standard permit issued under Section 382.05198. An applicant for a permit for a concrete plant that does not meet the requirements of a standard permit issued under Section 382.05198 must comply with:

(1) Section 382.058 to obtain authorization to use a standard permit issued under Section 382.05195 or a permit by rule adopted under Section 382.05196; or

(2) Section 382.056 to obtain a permit issued under Section 382.0518.

(b) An applicant for an authorization to use a standard permit under Section 382.05198 must publish notice under this section not later than the earlier of:

(1) the 30th day after the date the applicant receives written notice from the executive director that the application is technically complete; or

(2) the 75th day after the date the executive director receives the application.

(c) The applicant must publish notice at least once in a newspaper of general circulation in the municipality in which the plant is proposed to be located or in the municipality nearest to the proposed location of the plant. If the elementary or middle

school nearest to the proposed plant provides a bilingual education program as required by Subchapter B, Chapter 29, Education Code, the applicant must also publish the notice at least once in an additional publication of general circulation in the municipality or county in which the plant is proposed to be located that is published in the language taught in the bilingual education program. This requirement is waived if such a publication does not exist or if the publisher refuses to publish the notice.

(d) The notice must include:

(1) a brief description of the proposed location and nature of the proposed plant;

(2) a description, including a telephone number, of the manner in which the executive director may be contacted for further information;

(3) a description, including a telephone number, of the manner in which the applicant may be contacted for further information;

(4) the location and hours of operation of the commission's regional office at which a copy of the application is available for review and copying; and

(5) a brief description of the public comment process, including the time and location of the public hearing, and the mailing address and deadline for filing written comments.

(e) The public comment period begins on the first date notice is published under Subsection (b) and extends to the close of the public hearing.

(f) Section 382.056 of this code and Chapter 2001, Government Code, do not apply to a public hearing held under this section. A public hearing held under this section is not an evidentiary proceeding. Any person may submit an oral or written statement concerning the application at the public hearing. The applicant may set reasonable limits on the time allowed for oral statements at the public hearing.

(g) The applicant, in cooperation with the executive director, must hold the public hearing not less than 30 days and not more than 45 days after the first date notice is published under Subsection (b). The public hearing must be held in the county in

which the plant is proposed to be located.

(h) Not later than the 35th day after the date the public hearing is held, the executive director shall approve or deny the application for authorization to use the standard permit. The executive director shall base the decision on whether the application meets the requirements of Section 382.05198. The executive director shall consider all comments received during the public comment period and at the public hearing in determining whether to approve the application. If the executive director denies the application, the executive director shall state the reasons for the denial and any modifications to the application that are necessary for the proposed plant to qualify for the authorization.

(i) The executive director shall issue a written response to any public comments received related to the issuance of an authorization to use the standard permit at the same time as or as soon as practicable after the executive director grants or denies the application. Issuance of the response after the granting or denial of the application does not affect the validity of the executive director's decision to grant or deny the application.

The executive director shall:

(1) mail the response to each person who filed a comment; and

(2) make the response available to the public.
