

LEGISLATIVE BUDGET BOARD
Austin, Texas

FISCAL NOTE, 81ST LEGISLATIVE REGULAR SESSION

May 5, 2009

TO: Honorable Rodney Ellis, Chair, Senate Committee on Government Organization

FROM: John S. O'Brien, Director, Legislative Budget Board

IN RE: HB2004 by McCall (Relating to a breach of computer security involving sensitive personal information and to the protection of sensitive personal information and certain protected health information.), **As Engrossed**

No significant fiscal implication to the State is anticipated.

The bill would amend the Government Code, the Local Government Code, and the Health and Safety Code to require state agencies and local governments to notify affected individuals of a computer security breach which discloses "sensitive personal information," such as an individual's name and Social Security number, driver's license number, financial account information, or certain health information.

Notice shall be given as proscribed by current requirements in Section 521.053, Business & Commerce Code, to the same extent as a person who conducts business in this state.

The Office of the Attorney General (OAG) reported that its policy has always been to inform affected individuals on any breach of personal data. The OAG has taken necessary precautions to protect sensitive information, but, there are certain internal factors (i.e., staff and/or contractors) that could compromise the integrity of system information and/or access resulting in the removal of sensitive computer information. Costs to the agency will depend on the number and size of security breaches that could occur in the future.

The Department of Information Resources reported that its privacy incident response process and major contracts with outside vendors include provisions for notification to individuals following a privacy breach incident. These documents could be amended to align with the definitions and requirements of the proposed legislation with in-house resources.

If an agency chose to send written notice by mail, then it is assumed that the cost for notification by mail would be approximately 50 cents for each affected individual. It is also assumed that, statewide, the number of affected individuals and the frequency of computer security breaches would not be high enough to require enough notifications by mail to create a significant fiscal impact to the State.

Local Government Impact

The fiscal impact to local governmental entities would vary depending on several factors, including the type of computer technology an entity uses, the number of security breaches, and the method used for notifying individuals.
