I work as a financial analyst so I know the importance of data and what it means for organizations. Today Texas just doesn't have the data for Sickle Cell. This registry will be a step in the right direction for funding and treatment for this genetic disease. I'm in total support of creating a registry in Texas.

Help raise more awareness and get more help with the "silent" disease (sickle cell) that is affecting so many. I, being one of them.
