

PUBLIC COMMENTS

SB 760

HOUSE COMMITTEE ON STATE AFFAIRS

---

Hearing Date: May 6, 2021 8:00 AM

---

Laura Good

Self

Hico, TX

Keep Texas's power grid independent. Hold those in charge responsible for mistakes. Winterize! Severely cold weather in Texas is not unheard of. I've personally lived through at least 5 terrible Texas winters. Sun & wind are NOT as reliable as clean natural gas, which Texas has plenty of. Stay energy independent! No reason for the skyrocketing price change during the storm. No reason for rolling blackouts like California, we're better than that. Step up and get the job done correctly!

MargaretHB6/SB7 Ogden-Howe

Reverend

Georgetown, TX

I support the advancement of alternative sources of energy. I strongly support any and all efforts to produce energy by means of the most non-polluting means possible. Therefore, I urge support of solar and wind power energy, and I think such alternate sources of energy will mean more jobs for Texans and far better breathable air for everyone in the world.

Richard Wormwood

Watauga, TX

Only if completely defunct and unprofitable should a viable solar plant be removed.

Susan Gillette

Citizens' Climate Lobby, Lubbock chapter

Lubbock, TX

The Lubbock Chapter of Citizens' Climate Lobby supports this bill and notes that a similar bill was passed last session concerning wind facilities. All infrastructure that has outgrown the purpose for which it is built should have to be removed by the company that owns it. We would like to see this type of responsibility put on other energy generators as well, including fossil fuels. In Texas there are currently over 6,000 orphaned wells that will cost hundreds of millions of dollars to cap and no end in sight. This is the type of disaster this bill wants to prevent with the solar power companies, but, we ask, when is the fossil fuel industry going to be put to the same standards?
