### **AUTHOR'S / SPONSOR'S STATEMENT OF INTENT**

The risk of espionage at Texas universities has become a growing concern in recent years, as these institutions continue to attract researchers, professors, and students from all over the world. With the presence of high-level intellectual property and sensitive information, the potential for espionage activities is significant, particularly with the involvement of foreign entities. Texas universities are particularly vulnerable to this type of risk, as they often have close ties with research institutions, government agencies, and international partners, making them an attractive target for intelligence gathering and theft of sensitive information.

There have been cases of foreign entities attempting to steal sensitive and confidential information from universities, which could result in significant damage to the nation's security and economy. Such activities also jeopardize the academic freedom of researchers and undermine the integrity of the research enterprise. Given the critical role that universities play in research and innovation, protecting their intellectual property is essential to maintaining Texas's competitive edge.

S.B. 1741 seeks to address these concerns by implementing measures to prevent espionage and intellectual property theft at Texas universities.

As proposed, S.B. 1741 amends current law relating to measures to prevent espionage and intellectual property theft at public institutions of higher education.
